### **ALLIANCE BETWEEN ORION FINANCIAL AND ACS ADVANCES E-RECORDING INITIATIVE NATIONWIDE**

Document services provider surpasses 4,000 documents e-recorded to-date in 2005

**SOUTHLAKE, TEXAS – August 2, 2005** – Orion Financial Group, Inc., ([www.orionfji.com](http://www.orionfji.com)), a leading document services provider, has seen its alliance with ACS, Inc., advance e-recording nationwide. The agreement gives Orion access to ACS' eRX Web Interface, and facilitates electronic recording in an increasing number of participating counties throughout the US. In comparison to 3,300 documents e-recorded in 2004, Orion has surpassed 4,000 e-recorded documents to-date in 2005 – all completed with no additional requirements from its clients, and no additional costs.

ACS has developed the Electronic Recordation Exchange, or eRX, which is an Internet-based service that connects organizations who record documents with counties to facilitate electronic recording of land records. For Orion, the eRX system increases quality control, integrity in the process and data, and is much quicker – improving overall compliance. As counties continue to see the benefits, a growing number are moving towards gaining e-recording capabilities. Orion was the first to record electronically in Colorado, Texas and Pennsylvania. Currently, the company performs e-recording in approximately 25 of the most populated recording jurisdictions.

“As the mortgage industry moves towards handling all its documents electronically, Orion will remain at the forefront of this shift with innovative solutions in document services,” noted Mike Wileman, President of Orion Financial Group, Inc. “Our proprietary assignment and lien release system, DocPro!®, has been enhanced to seamlessly facilitate e-recording. This allows our clients to have assignments and/or lien releases recorded via paper or electronically, depending on the county, with the same superior level of quality and integrity. The combination of leading-edge technology and superior customer service is why we have the lowest rejection rate in the industry.”

Orion's proprietary software system, DocPro!, gives the company the ability to seamlessly update its process when a new county comes online. This is especially important as counties move towards e-recording, as turnaround times can be reduced from 100 days, down to 1 hour. DocPro! is designed to generate paper and electronic recording information from the same system, uncommon for the industry. The Orion system needs no additional inputs as it automatically knows what counties are e-recording, and the specific information needed.

“We are very pleased to have formed an alliance with such a respected company like ACS, that has remained strong for more than two years – and we will continue to pursue relationships that drive the document services industry forward,” added Wileman.
